

## DESIGNER-STYLE SLIM BUTTON KEYPADS

5-Button

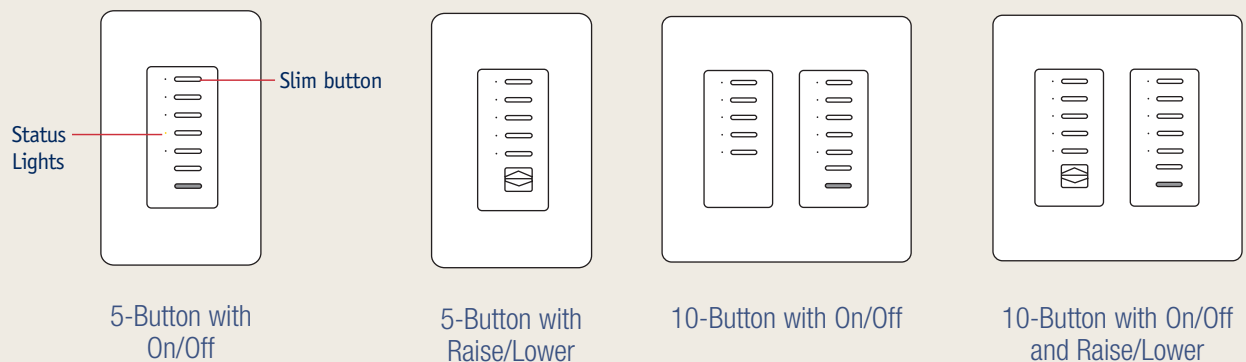

10-Button

Designer-style slim button keypads provide the ability to control and monitor lighting, window treatments, and other home systems. Each keypad button may be programmed to control an individual lighting zone, a group of lighting zones, or a lighting scene for your entire home and landscape.

*HomeWorks* keypads minimize wall clutter by eliminating the need for several switches, while maximizing the number of functions possible. Keypad buttons are programmed to create a customized control that meets the individual needs of each home. Available in a variety of colors, keypads can become design elements that blend in or provide a striking contrast to your décor.

*Designer-style slim-button keypads are suitable for any home—new or existing.*
