

DESIGNER-STYLE LOCAL LIGHTING CONTROLS

Dimmer

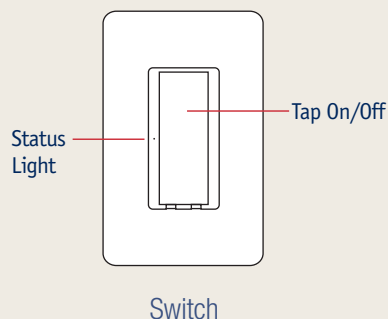

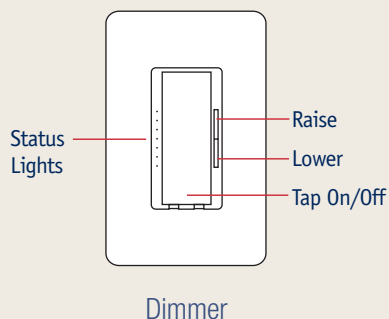

Switch

Designer-style local lighting controls take the place of standard dimmers and switches, providing control of one light or one group of lights. Local lighting controls, which can dim lights or turn lights on and off, are typically used where simple, intuitive controls are desired. The built-in intelligence allows each local lighting control to be controlled from any *HomeWorks* keypad in the home, as well as from touchscreens, universal remotes, and other home automation controls. Available in a variety of colors, local lighting controls can become design elements that blend in or provide a striking contrast to your décor.

Designer-style local lighting controls are suitable for any home—new or existing.

DESIGNER - STYLE LOCAL LIGHTING CONTROLS

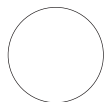

FEATURES

- Allows local dimming and on/off control of one light or one group of lights
- Lights fade up or down when tapped on or off
- Double-tap brings lights instantly to full on
- Press-and-hold initiates long fade to off
- Remote dimmers and switches allow control from 3- and 4-way locations
- Green status lights indicate current light level
