

## VAREO® - STYLE LOCAL LIGHTING CONTROLS

Vareo-Style Local Lighting Controls take the place of standard dimmers and switches, providing control of one light or group of lights. Local Lighting Controls, which can dim lights or turn lights on and off, are typically used where simple, intuitive controls are desired, and control of lights in other areas of the home is not needed. However, the integral microprocessor intelligence allows each Local Lighting Control to be controlled from any Keypad in the home.

This unique system design of HomeWorks Interactive allows Local Lighting Controls to be incorporated into a centralized lighting control system, which provides the ultimate in reliability, flexibility, and simplicity.

Local Lighting Controls can be controlled from HomeWorks Interactive Keypads, as well as from touchscreens, universal remotes, and other home automation controls.
